

Air Operated Diaphragm Pump

Max Flow:

15 GPM with 100 psi air supply

FEATURES

- **Stall-Free Design** – A patented non-centering, spring assisted shifter is incorporated into every “Y” series pump, ensuring a positive shift every time. All “Y” series pumps eliminate the need of pre-packing or extended lubrication.
- **Oil-less Operation** – Oil-less operation “Y” series pumps incorporate no metal-to-metal wearing surfaces. This design means no oil misting into the environment that would create an unhealthy working condition, and no oil, lubricants or grease to contaminate your products. Our oil-less design results in lower operating and maintenance costs.
- **Quiet Operation** – Air valve design minimizes exhaust noise providing a significantly quieter work environment.
- **Portable/Simple Installation** – Simply connect your air supply line and liquid lines; the pump is now ready to perform. There are no complex controls to install and operate.
- **Submersible** – If external components are compatible, these pumps can be submerged in the liquid by simply running the exhaust line above the liquid level.

*Pump Body Materials

A - Aluminum
S - Stainless Steel

Elastomers

Buna-N Santoprene®
Neoprene Teflon®

Applications

- Aircraft Industry
- Automotive
- Beverage Industry
- Chemical and Petroleum
- Glass and Fiberglass
- Marine
- Metal and Steel
- Mine and Construction
- Paint
- Paper and Wood

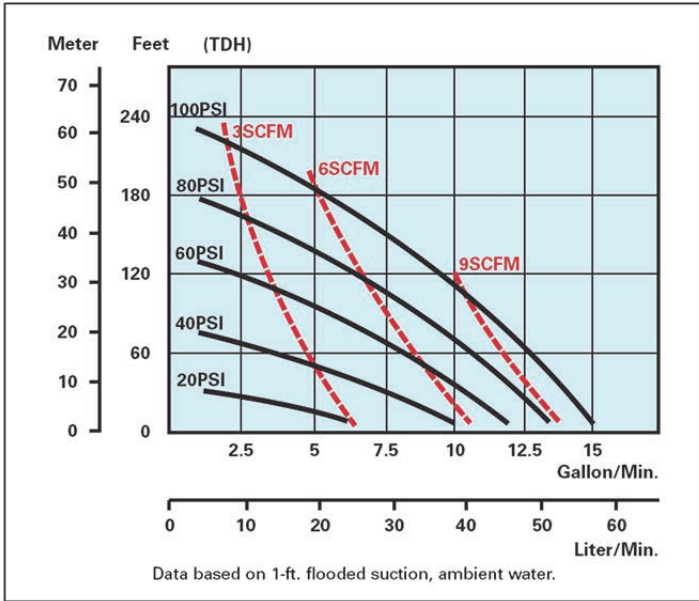

MODEL (Dimensions)		Aluminum	Stainless Steel

The performance curves shown and other published literature reflect an average performance for all materials and all elastomers, including Teflon®. Derating of the performance is not necessary for Teflon® fitted pumps.

To determine the correction flow rate, find the intersection of the VISCOSITY on the above curve and read the FLOW CORRECTION FACTOR. Multiply this factor by the desired flow of the pump and use this new flow rate to select a pump from the performance curves.

Example \triangle 10,000 CPS = 2.5 Flow Correction Factor.
If viscous flow desired is 42 GPM, then multiply 42 by 2.5 = 105 (GPM equivalent water flow)

Example \triangle 74,000 SSU = 4.0 Flow Correction Factor.
If viscous flow desired is 35 GPM, then multiply 35 by 4.0 = 140 (GPM equivalent water flow)

Technical Data		
Maximum flow	GPM (liters per Minute)	15 (56.8)
Displacement/Stroke	Teflon® Diaphragms Gal (liters)	0.031 (0.117)
Max Air Inlet Pressure	PSI (bar)	100 (6.9)
Max Spherical Solids Size	IN (mm)	1/32 (1)
High Temperature Limit	*(See elastomer specs. below)	
Low Temperature Limit	°F (°C)	40 (4.44)
Shipping Weight	Lbs (kg)	
Aluminum		12.0 (5.44)
Stainless Steel		16.6 (7.53)
